TechTip

Choosing Vacuum Accessories

For your vacuum to be effective, it must be equipped with the proper accessories.

First, determine whether you want to use 1½" or 2" accessories. There are advantages and drawbacks to both. Since the air moves through a 1½" hose with greater velocity than through a 2" hose, the

vacuum will have an easier job of pulling the debris into the tank. 1½" tools are generally selected for routine all-around vacuuming applications because they are easier to handle and are more comfortable to use. However, if you need to pick up debris with large pieces such as metal chips or lint, the 2" tools are suggested because they are less likely to clog.

Goodway offers several accessory kits for common applications which makes

ordering easy and convenient. The VAC-KIT-9 is great for all types of general vacuuming in industrial environments. The VAC-KIT-4 is designed for applications in commercial and institutional situations.

The VAC-KIT-5 is for bulk pickup applications. There are also grounded kits available for use with our air vacuums.
